

Value of Grasslands

Grasslands provide ecological services such as water filtration, underground carbon storage, and habitat for species at risk. They also have significant recreational, cultural, and economic value. Why do you think grasslands are important?

A large rectangular area enclosed by a dashed line, intended for drawing an activity. In the top right corner of this box, there are two black silhouettes of birds in flight.

Draw an activity you like to do in the grasslands such as hiking, camping, or bird watching.
